An Affordable and Easy-to-Use Telephone Messaging Solution

The PhoneTree 2100 is an easy-to-use, affordable single-message calling solution, offering many advanced features with the flexibility of multiple phone lines. Operation is so simple, you can start calling within minutes of taking the unit out of the box. You just record another message for the next job, import your list and start calling.

The PhoneTree 2100 delivers up to 60 calls an hour using a single telephone line. But if your needs expand, you can upgrade to as many as 4 telephone lines, letting you send up to 240 calls per hour. Enter or import your data, record your message, and click "Start New Calls." Or, you can use our new Call Wizard to easily set up customizable calling options step-by-step. Your message is delivered in crystal-clear 16-bit digital sound. Once calling is complete, you can see the results in detailed call status reports.

Benefits of the 2100:

- Multiple area codes? Long-distance or local? Metro dialing? PhoneTree's dialing translator easily handles any type of number.
- If the line is busy or no one is home, PhoneTree remembers to try again later, attempting busy lines sooner than those not answered, just as you would.
- By using up to 4 phone lines, you can reach large numbers of people in a fraction of the time otherwise required for a person to make the same number of calls.
- Make sure your calls aren't lost in the "kid zone" by having call recipients press "9" to play your message after hearing your greeting.

Technical Specifications

Applications

- Administration features let you control who uses your PhoneTree, sync data to a master list, and more, all from a point-and-click interface.
- Exclusive AVR-4™ Advanced Voice Recognition technology detects answering machines and “waits for the beep” to leave your message.
- Remote access lets you start a call session from any touch-tone phone, with voice prompts to guide you through.
- Print your call status reports to your printer or even have them emailed—at your command, or automatically!

Phone Line Requirements

Base price includes one phone port. Additional ports (up to 4) are available. Customer must supply one analog phone line for each PhoneTree port ordered.

Hardware Requirements

- Pentium PC and Windows® 98SE/2000/ME/XP
- 64 MB RAM (128 MB preferred)
- 50 MB hard drive space (100 MB preferred)
- CD-ROM drive
- 1 USB port (multiple ports or USB hub required for larger systems)

1. PhoneTree reads your call list and call job specifications from your PC.
2. PhoneTree sends your messages (automatically, or at your command).
