Powerful Telephone Messaging Solutions for Busy Organizations

With a host of features for a wide variety of applications, PhoneTree 2500 is the best choice for busy, growing organizations who need both power and flexibility.

PhoneTree 2500 has the unique ability to allow multiple call sessions at one time—even if using only one phone line. There is no need to wait to finish a call job before starting a new one—the 2500 can handle all your calls at once and make up to 3,000 calls per hour!

Benefits of the 2500:

- Reach large numbers of people quickly with multiple, simultaneous call sessions, using up to 48 phone lines at once
- Choose which job is called first, in case of emergencies or other time-critical situations
- Receive feedback via touch-tone reply:
 “Press ‘1’ if you can attend Saturday’s picnic...”
 “Using your touch-tone keypad, enter the number of guests you plan to bring...”
- Start calls from any computer on your network—no need to work from only one PC
- Send companion e-mails along with your calls at the same time, giving your messages the best chance of getting through
- Full-featured multilingual capability allows you to send messages in different languages within one call session
- Send group-specific messages easily with “virtual” PhoneTrees, set up for different calling jobs

PhoneTree 2500

Technical Specifications

Applications

- Does your organization have members who can't make every meeting, yet need to stay involved? Let PhoneTree keep them updated, and even collect their input.
- Got a lot of calls to make but not much time? With multiple session and line capability, PhoneTree makes short work of large tasks.
- You can tell PhoneTree which jobs to perform first with its built-in prioritization option.
- Save the settings for any call job (times to call, whom to call, which message, etc.) as a "virtual" PhoneTree—keep as many as 256!

Phone Line Requirements

Base price includes one phone port. Additional ports (up to 48) are available. Customer must supply one analog phone line for each PhoneTree port ordered.

Hardware Requirements

- Pentium PC and Windows® 98SE/2000/ME/XP
- 64 MB RAM (128 MB preferred)
- 50 MB hard drive space (100 MB preferred)
- CD-ROM drive
- 1 USB port (multiple ports or USB hub required for larger systems)

1. PhoneTree reads your call list and call job specifications from your PC. 2. PhoneTree sends your messages (automatically, or at your command).
